The resulting MIDI files are accessible in AutoCAD as MIDI instruments, which can be further edited with the use of external MIDI editors. AutoCAD also supports music notation and score editing using external MIDI editors, such as MIDIedit. AutoCAD may also record audio from a computer's microphone or from external MIDI input devices. AutoCAD imports and exports G-Code data, which is used to control a CNC milling machine. AutoCAD can send and receive data over FTP or SSL connections. Version history AutoCAD is continuously being developed and is used in more than 125 countries, with approximately 50 million active users. Q: PostgreSQL sequence updates to UPDATE queries I know that for tables that use sequences, the way to maintain them (in order to get new auto-increment values) is to UPDATE the table. I have a weird use case in which I need to add a column to a table with an auto-increment sequence, but I do not want to add a new sequence with the new column, so I was planning on doing an UPDATE query with the column as a SET parameter. I'm assuming that when I do an UPDATE query with a SET parameter, the change will not be sent to the sequence, and I'll just get a new ID. What if the table already has a sequence with an ID of 1234? And I do an UPDATE query with SET ID=42? Does PostgreSQL just not update it or does it do some sort of hackery to find a sequence with that ID, and if so, how does it find it? A: The only way the sequence will update itself is if you
