FIGURE 4-6: Microsoft Word and its text-editing tools make writing documents much easier. The printed page The ultimate source material for creating and printing documents are your printers: Under Windows, the default printer is chosen automatically by the operating system. (In macOS, you set the default printer, but that's an advanced setting, so you use the Print dialog in System Preferences to make it happen.) When you print something, the page is usually created in one of two formats: Photography and camera film/capture mediums If you have an inkjet or laser printer, the page is developed on the page-making cylinders. Each image is fixed into the page with ink by the developer. A ribbon, known as a film, brings a color to the page. You print an image by transferring a film with ink, creating a toner image and giving it to the print engine. Photography: Your first instinct is probably to say that photography is printing, but it is actually much more. The entire print process is much more complex. Many photographers use different kinds of printers in different ways, but the methods are basically the same. The equipment you use can be either film-based or digital. Digital photography, which stores an image directly on the memory device, offers several benefits to photographers. One of the biggest is that you don't have to carry the expensive old-fashioned equipment that produces pictures that develop in the dark. Also, when you digitize your images, you can make them as large as you want them. You can probably print any digital photo that you've taken. You'll have to sift through a few choices when you convert your digital pictures into print-ready image files, though. Fortunately, most digital cameras print immediately and include a small instruction booklet in the box with the camera. If yours doesn't include such a thing, a trip to your local retailer usually finds the manual for you. Many printer companies now also support the option to download a digital camera's image directly to the printer. This feature gives you the option to set a print size — whether you want your portrait to be 8 inches wide or 10 inches wide, for example — and even to create a book or portfolio of your portraits, as well as the ability to make the background white or have a photo frame printed around the print. The process of making a print from an image is shown in Figure 4-7: 1

Want to learn Photoshop? Here's how to get started with Photoshop for beginners. What's the difference between Photoshop and Photoshop Elements? Photoshop and Photoshop Elements use a very similar user interface with many of the same features and a common image-editing work flow. There are a few differences between Photoshop and Photoshop Elements. Photoshop • Photoshop is available on Windows, macOS and Android. It has a relatively low price, but there is a significant investment and advanced learning curve. Photoshop is the industry standard graphics software. • Photoshop also offers a professional design toolkit with dozens of plug-ins to extend its functionality. • Photoshop is used to create and edit images of all kinds, from retouching photographs to designing new logo designs and building 3D models. Photoshop Elements • Photoshop Elements is available for macOS, Windows and Linux. It has a much lower price, but is designed to be easy to learn and use. It's designed as a package focused on photo editing and is no longer included in the Adobe Creative Cloud. • Photoshop Elements includes a lot of the tools available in the full version, but it is simplified and more focused on photo-editing. • Photoshop Elements is ideal for working with images and features a simpler user interface. It's best suited for hobbyists and for creating images that aren't very complicated. It's important to note that Photoshop Elements is more suited to hobbyists, creative professionals and others who aren't interested in advanced features and will be creating images that are very simple and mostly non-destructive. Photoshop Elements has a simplified user interface, and it works well for hobbyists, creative professionals, designers, and other photographers, graphic designers, web designers and Discord emoji creators. Learn Photoshop and Elements – a short primer! Let's start with a quick lesson on how to get started with both Adobe Photoshop and Photoshop Elements. Your preferences When you first start using Photoshop Elements, it's recommended that you download the full version and that you learn the basics using that version before starting to use Photoshop Elements. If you have a slow internet connection, go to the full version first. The full version of Photoshop will take longer to download but it will also teach you better how to use the software. When you're ready to use a681f4349e

Q: Symfony: If controller returns a Response that is not an array In a controller I have the following query: $this->entityManager->find($entityName, $entityId); $tmp = $this->getDoctrine()->getManager()->newQuery(); $result = $tmp->select('c') ->from($entityName, 'c') ->where($tmp->expr()->eq('c.id', $entityId); $this->getDoctrine()->getManager()->flush(); This is fine. The query works and gets results. But I'm confused as to what to do if $entityName is not an entity and so I cannot use $this->getDoctrine()->getManager()->newQuery() and the entity manager is not available. How would one return a response from a query in this instance? Obviously I can make the controller return a response and then dump the query information to it, but is there a 'direct' way to do it? A: $entityName is an Entity? You can use $result = $tmp->select('c')->from($entityName, 'c')->where($tmp->expr()->eq('c.id', $entityId); So what you can do is: if (!$entityName instanceof Entity) throw new \InvalidArgumentException("entityName should be an instance of Entity"); $manager = $this->getDoctrine()->getManager(); $entity = $manager->getRepository($entityName)->find($entityId); if (!$entity instanceof Entity) throw new \InvalidArgumentException("entityName should be an instance of Entity"); $tmp = $manager->newQuery(); $tmp->select('c') ->from($entityName, 'c') ->where($tmp->expr()->eq('c.id', $entityId); $result = $tmp->getResult(); $this->render('path_to_view', [

Q: How do I get the point of a solar eclipse using Python? I'm writing a program that uses pyephem to calculate the exact position and time of the total solar eclipse that will take place on 21 August 2016 in the Southern Hemisphere. The program works to get the point of the eclipse, but I'm struggling to predict the time and date of this event. I use dateutil to do the calculations. I don't use IAU definition of the date/time of solar eclipses, which vary by region and can change at any time. A: There are two parts to your question. First, you need to figure out when the eclipse will actually begin. This is a little more complicated than you might expect. You can look up all the dates and times of past solar eclipses on Second, you need to calculate the distance between your current location and the path of the total eclipse. Here are some resources to help you get started. There are lots of maps of the path of the eclipse available online, which you can use to manually find the point of the eclipse. You can also use the list of currently known eclipse locations here to look up the point of the eclipse. The two pieces of code below, from the Python site, do the second part. You'll need to change the input coordinates to your own latitude and longitude. import ephem from datetime import datetime, timedelta now = datetime.now() # Here is the data from the 'currently known eclipse location' list # from here # ecl = [{'ra': 171.39, 'dec': -23.07, 'dt': '2016-08-28T00:15:44.50000', 'time': datetime.now()}, {'ra': 171.16, 'dec': -22.99, 'dt': '2016-08-28T06:21:22.50000', 'time': datetime.now() + timedelta(days=2)}, {'ra': 171.06, 'dec': -23.02, 'dt': '2016-08-28T08:21:33.50000', '

Minimum: Mac OS X v10.6 Snow Leopard, or Mac OS X v10.8 Mountain Lion 8GB of RAM 8GB of available hard disk space (MacBook Air, 2011) OS X Lion v10.7 or Windows 7 Mac OS X v10.6 Snow Leopard, or Mac OS X v10.8 Mountain Lion Minimum:8GB of RAM8GB of available hard disk space (MacBook Air, 2011) What's New Version 3.2.1: - Air
